

*Adversum Libri Prognostici amici sui chari. R. M.
R. Aliphus Lectori carmen Prognosticon.*

STell mihi secreta Pollux non parva recludit.
Et non ista facit parvulus iste liber.
Vana superstitio nulla hic, ars impia nulla,
Ista licet rabido Zosius ore crepat.
Quanta Deo sub sunt, Coelumq;, Solumq;, Lunamq;
Quaeq;, quod facient sidera, terra, mare:
Prima Deus causa est, causa sunt Astra secundum.
Nil si prima vetet, causa secunda valet.

H. B.

*Ad amicum suum charissimum R. M. de libro
hoc prognostico.*

Aldi tu mihi referas mysteria Caeli.
Quid signent nobis astra corusca Poll,
Quid pluvias, ventos, tempestatesque sonoras
Excitet, his pulsus, unde serena dies.
Ella sapiente, doces; namque omnibus istis,
Causam Causarum tu facis esse Deum.

R. M.

What dayes the Faïres of the Burrough of Darby are
kept, this present yeare, 1640.

The first, upon Friday in Easter weeke.
The second, on the 4 and 5 dayes of May.
The third, on Friday in Whitsun weeke.
The fourth, on the Friday before Midsummer day, being the
yeare the 13 of June.
The fifth, on the 25 of July, being S. James day.
The sixth, on the 27 day of September.

A necessary and perfect rule for ever to know
when the 4. Termes begin and end : and how
many Returnes are in every Terme.

Eight dayes before a Terme shall be,
The Exchequer openeth certainly,
Except the Terme of Trinity,
Which openeth but 4 dayes before assuredly.

1 **Quary Terme** beginneth the 23 day of January (if
it be not Sunday) but then the next day after, and endeth
the 12 or 13 of February, and hath 4 Returnes.

Octabis Hilarij	}	Crastino Purificationis.
Quind. Hillarij	}	Octabis Purificationis.

2 **Easter Terme** beginneth 17 dayes after Easter, and
endeth 4 dayes after Ascension day, and hath 4 Returnes.

Quind. Pasche	}	Mense	}	Quind. Pasche.
Tres Pasche	}	Pasche	}	Crastino Ascensionis

3 **Trinity Terme** beginneth the next day after Corpus Christi day, and endeth the Wednesday forty-
night after, and hath 4 Returnes. Note that Corpus Christi
day is alwayes the Thursday after Trinity Sunday.

Crastino Trinitatis	}	Quind. Trinitatis.
Octabis Trinitatis.	}	Tres Trinitatis.

4 **Michaelmas Terme** begins the 9 of October (if it
be not Sunday) and endeth the 28 day of November,
and hath 3 Returnes.

Octabis Michael	}	Crastino Anlmarum
Quind. Michael	}	Crastino Martini
Tres Michael	}	Octabis Martini
Mense Michael	}	Quind. Martini.

In my Calendar following you shall finde both the be-
ginning and ending of the Termes, and all the Returnes
set downe upon the dayes of the month that they fall up-
on this parte, 1641.

The Iulian Soligenion, or
English account for this
year. 1641.

The Lillian, Gregorian, or
Roman account for this
year. 1641.

Dominica post Trinitatis. 16

Charles our Sovereigne King, did begin his reign
over Great Brittain, Anno 1625, March the 27. and hath
reigned 16 yeares compleat this year, 1641 March. 26.

Veneris ingens sidus, cum ante graditur Solem parvulus
Graecol, Lucifer Latine dicitur: Cum vero subsequitur, & ab
occasu resulget, vesper vespertus & idcirco appellatur.

This Golden Planet Venus Occidentall, from the be-
ginning of this year 1641. to the 29 day of June follow-
ing, and so long this year she is our glittering Evening
Starre, setting after the going downe of the Sunne. For
all the rest of the year she, she is Orientall, rising before
the Sunne, and therefore called our morning Starre.

A most plain and easie Table shewing the true
time of the beginning, continuance, and yeares, since
the reigne of each King & Queen in England, from the
Conquest, untill this yeare, 1641. Gathered forth of
Chronicles, and set forth for profitable vse of
Lawyers, Schollers, &c.

The Kings names.	Began they reigne.	The time they reigned.	Since they reigne.

Note that a. stands for ante, or before noone, and p. for post, or at
 noone. Example, the 5. day of this moneth, is a Conjunction of
 Mars and the Moone, at 9. a clocke at night.

February the moone hath 29. dayes.

The description of the Sanguine people.

The bodies where heat, and moisture dwells,

Be Sanguine people, as Galen tells.

With visage faire, and cheekes rose ruddy.

Their sleepes are much, and dreames be bloody.

May the moone hath 30. dayes.

Fatnesse, softnesse, haire plaine and right,
Narrow veines, and colour white,
Dull of wit, and not heart too bold,
Pulse very slow digestion cold,

June the moone hath 29 .dayes.

Sleeping overmuch, urine grosse and pale,
Spittle white and thicke thus ends my tale.

The Chollerike complexion beginneth.

The Chollerike are hot, and dry as fire,
With leanenesse of limbes, and puffed with ire.

July the moone hath 30. dayes.

With Costive bellies, and little sleepe,
 Dreames of fire, and wonders deepe,
 With fallow colour, or tawny red.
 Loving salt meates and crusts of bread.

October the moone hath 30. dayes.

Colour whitely, or like to lead,
 Much watch, and dreames of dread,
 And stiffe in foolish fantasie,
 Digestion slow, and long angry.

The use of this Table with a Caution.

Doc but observe in the sixt columnne of the Almanacke the houres and minuts of full-sea at London-bridge over against each severall day of the moneth, to or from which time there noted, adde or substraft such houres and minutes as this Table above doth appoint, and the totall of the one, or remainder of the other shall be the time of full sea, at any of these places abovesaid, saved the Anticipation or protraction of time, which by the winds, Land-floods, or Moones latitude, may be caused, which may be an houre, or sometimes more or lesse error, according to their scite and quantity, a thing very remarkable of Seamen when they passe by any Sands, over any barren haven, or such like.

Allestree. 1641.

**An Appendix unto the
precedent Almanacke, for
this present yeere of Grace.

Allesree. 1641.

A memorandum of all the Eclipses this
Yeere. 1641.

The two Luminaries this yeere current will
suffer foure times the losse of refection of the
light which they usually impart to the earth, twice
the Sunne and twice the Moone: of the which,
the latter of the Moones Eclipse will be seene
upon our Horizon all ower great Britaine, but all
the rest in other nations beyond the Seas: and
not with us.

The first Eclipse is of the Moone on Thurs-
day the 15. day of Aprill according to the English
account, but the 15 day of the same moneth accor-
ding to the Roman: it will be seene under the
earth with the Antipodes and our Pericci of like
dwellers. The beginning of it will be at 11. a
clocke 3 min. 39 sec. The middle at 40 min. 16 sec.
after noone. The end at 2 a clocke, 16 min. 53 sec.
after noone.

The second Eclipse is of the Sunne 29 of A-
prill by our account, but the 9 day of May by the
Romans. It will be seene towards the Sunne
rising, Pervanz parte Peruvia & Chili. The time
of Incidence is 1 houre, 50 min. The whole dura-
tion is 3 houres. 40 minuts.

The third Eclipse is of the Moone on Friday
at night, the eighth of October according to our
account, and the 18 of the same moneth by the
Roman. The beginning will be at 5 a clocke, 53
min. at night. The middle at 7 a clocke. 11 min.
The end at 8 a clocke, and 46 minuts. The whole
continuance is 3 houres, and 11 minuts. The E-
clipsed Digites are 7. 49 minuts. The Moone at
that time moving under the 26 grad. 6 min. of
Aries the Ascendent of the Angle of the West in
my Latitude, the Moone not farre from the Dia-
gones

Allestree. 1641.

gong taylor, Mars afflicting the same degree in the 23 degree of Libra, and ♄ in the 20 degree of ♋. This eclipse will be scene faire (if the ayre be cleere) with us in great Britaine, neare Nova Sembla, Muscovia, Camanus, and under the government of Persia, &c.

The fourth and last Eclipse is of the Sonne, the 24. of October by our English account, but the third of November by the Roman. That will be very conspicuous in Lituania, Moldavia, Bodolia and Thracia: and in the fornamed places it will be scene at one a clocke and 3 minutes in the afternoon.

Notes Astronomicall.

Saturne is direct from the beginning of this yeere unto the 12 of June, from thence to the 29 of October Retrograd: and from thence to the yeere end he is Direct.

Jupiter is Retrograd from the 20 of May to the 17 of September, all the rest of the yeere Direct.

Mars is moved in his Direct motion all the yeere.

Venus is hindered in her Retrograd motion from the 9 of June unto the 21 of July, all the rest of the yeere whee is Direct.

Mercury is Retrograd from the 18 of April to the 10 of May, from the 13 of August to the 4. of September, and from the 6 of December to the end of the yeere, and all the rest of this yeere he is Direct.

Direction of a Planet, is its progression according to the succession of the Signs, from the East into the West: as from Aries unto Taurus, from Taurus to Gemini.

Retrogradation, is the motion of a Planet moving contrary to the succession of the Signs,

Allestree. 1641.

from East into the West, as when a Planet returneth from Taurus into Aries. Vac. curs. of booke of course, is when the Moone or any other Planet is separated from a Planet, and not loyned to another during his or her residence in the same Signe.

A Chronography of the 4. Quarters
of the yeere naturally.

1. **T**he Hymall Solstitiall, or winter Quarter did begin Astronomically the last yeere 1640. and continueth so as the Sunne is in Capricorne, Aquarie and Pisces. Which is from the 12 of December unto the 11 of March, and is naturally every yeere cold and moyste, causing mens bodies to be full of Signe, and as attributed to the last old age.

2. *Aequinoctium vernum*: or our Spring Quarter, beginneth with us Astronomically the 11 day of March, and continueth so long as the Sunne is in Aries, Taurus and Gemini, which is from the 11 of March unto the 11 of June, and is naturally every yeere hot and moyst, and is attributed to childhood.

3. *Solstitium Aestivum*: or our Summer Quarter beginneth Astronomically the 11 of June, computed from thence, to the 12 of September, and so long the Sunne is moving through the 3 signes of Cancer, Leo, and Virgo; and is alwayes naturally hot and dry, filling mens bodies with Cholericke humours, and is compared to youthfull age.

4. Autumnall Equinoctiall, or our Autumne or Hardest Quarter beginneth Astronomically the 12 of September, continuing from thence to the 12 of December this yeere, which time the never resting

reſling Dunne moeth through the 3 ſignes of Li-
bra, Scorpio, and Sagittary, and is alway naturally
cold and dry, filling mens bodies with Melan-
choly humours, and is compared to Virilitie, of
the ſtrength of mans age.

The ſignes of Cancer and Capricorne are called
with the Greeks, Tropicks: Aries and Libra are
called Aquinoſiall, becauſe when the Dunne en-
tereth them, he makes the dayes and nights equal
in length.

Prefages of weather, by the Rain-bow.

A Ristoſle ſaith, Met 3. Chap. 5. Iris duplex eſt,
Solaris & Lunaris; Illa frequens eſt, hæc rariſ-
ſima. Let every one that readeth this, take it for
truth, that in the yeare 1632. December the 16
being Sunday at night about 7 a clocke in the night
after Sun-ſetting, I and one other man did ſee a
very faire Raine-bow, in a oppoſite to the Moone,
thee being Eaſt and by South, the Bow being
Weſt and by North: We had much ſmall raine,
and much wind for many dayes after. For the
naturall ſignification of the Raine-bow is every
whit ſetted to ſhew Raine either paſt, preſent or
to come: for if it ſay in the ſonneſeed (which it
cannot doe except in the night) ſhe giveth warning
of very great raine to come ſhortly, but if it be
ſcene in the Eaſt, ſhe ſignifieth raine paſt by and
by, and that it will quickly ceale, and faire and
cleere weather to come. Alii ſic eſſerunt: If the
Raine-bow be ſcene after noone, or about 1, or 2 a
clocke, ſhe declareth that raine is at hand, for be-
cauſe that the vapours be not as yet diſſolved or
maſſed. If two Raine-bowes appeare at one
time, they give warning of raine within 1 or 2
dayes after. If Raine-bowes preſently after long
raine, ſheweth ſaies weather preſently after.

Allectres. 1641.

*Predictions of weather, according to
holy Scripture.*

1. **A** Cloud rising out of the West foretelleth
raime, and when ye see the South wind
blow, ye say, there shall be heat, and it cometh to
pass, Luke 12. 55.
2. When it is Evening, ye say, It will be faire
weather: for the skie is red, Mat. 16. 2.
3. And in the morning, It will be foule weather
to day, for the skie is red and lowering, Mat. 16. 3.
4. South winde is great heat in the Summer,
sayeth Iherusalem, Iob 37. 9.
5. Winde in the North predicteth cold wea-
ther, Iob 37. 9.
6. The Northwind bringeth away raine, Prov
25. 33.
7. The sweet influences of Plouades is scitu-
ated, in the 24 and 25. degrees of Taurus, with
the Poone both bring raine, and the Sunne with
Orion in the 17. degree of Gemini, bringeth raine.
Iob 38. 34.

*Of Physicke and the foure humours
in mans Body.*

The world consisteth either of things insensible
as of spirits, or sensible, as the Heavens, the
Elements, and the foure humours: which if the
foure humours doe exceed or alter that proportion
in mans body, that God created them the first be-
ginning, either in quality, or quantity, then they
commeth diseases and Achnesses. You have
heard me in past my minde in my Anatomies to
say written for Phlebotomy and purging, with
briefe Exortations for Physicke: Hereafter I will
say

say little of it now, we need not alwayes waste
one and the same thing.

Hippocrates definition of Physicke is a very
good one, he saith, it is a putting to, and a taking
away of such things as are wanting, or abound-
ing in mans body: the former hereof standeth in dir-
ecting of the body, the other in disburdening the
same of corrupt and superfluous humors, which
is best effected by blood letting and purging: but
first prepare and then purge, Augur stabulum pur-
gare, you must make the body cleane before you
can hope to doe any good. And concerning the ma-
ladies and chill dispositions of the body: Hip-
pocrates and Galen, may instruct other skillfull Phy-
sicians are not able to describe them exactly, much
lesse prescribe certaine remedies for them: neither
doe I purpose, nor profess the same, neither is it
necessary for this subject. But you may conclude
this, that no man, saith Plato, can be hurt but by
himselfe. And for as much as the chiefest and most
difficult point of Physicke (by the opinion of Galen
and others excellling in that Art) is to discern the
nature and property of every disease and sick-
ness, and thereby to manifest the causes thereof.
Nam sublata causa, tollitur effectus, Take away
the cause, and the effect will cease: Unto the
knowledge whereof Iusticiall Astronomy is most
necessary and most availeable, expressing very
certainely and particularly the state of the body,
nature of the infirmity, and consequently the
cause of the same, better then the Patients Ma-
rine, for Vrina est Meretrix. And remember the
true Proverbe, Scientia non habet inimicum nisi
ignorantiam.

And loving Reader although I need hardly
saye that the foure Elements, all the Planets,
and all the parts of Heaven are no Sole effici-
ent nor Compelling causes of any thing coming to
pass

pass into any man; but yet I doe beleave they are
all second causes. Who knoweth not, whether he
be Philosopher, or any reasonable creature, or
moll: but that Almighty God at the first when
he made the World (as in Gen. 1. and 2. Chap. he
did make all his Creatures, both celestiall bodies
and terrestriall: at which time God did give, and
put into them by his divine power, their influ-
ences, qualities, dispositions, and natures; where-
one, and gave them also power and commandment
to doe it at all times to the worlds end, except
himselfe command them to the contrary, Gen. 2.
Per, God gave to the Elements and Stars
their natures and influences example, Job 31
31, 32, 33. Canst thou binde the sweet influence
of Pleiades? or loose the bonds of Orion?
Canst thou guide Arcturus with his sonnes? And
gaine, They fought from Heaven, even the Stars
in their courses fought against Sifera, Judg. 5.
In consideration of which respects, Nihil agunt
causæ naturales, quod non divinæ Artis ordo præ-
ceperit. And Omne opus Naturæ, est opus intelli-
gentiæ. Nihil enim aliud planetæ, quàm quod Deus
præviderit, aut prædestinaverit, significant. I say
no more untill the next yeere, (if God will) but
this, that it is all sufficient for an Artist, though
he attaine not to the uttermost end, yet always
to performe so much as the rules of Art require.

Some briefe Rules for Husbandry, Gardening, &c. super-
stitiously attributed to the Moone, mooving un-
der the 12 signes of the Zodiacke.

Alomon saith, Eccl. 3. 1. To every thing there is a season (ele-
ction) and a time to every purpose under the Heaven. When it
is a fit time of season, to set of sow all kindes of seeds, the
Moone being in Ariete, Tauro, Cancro, Virgine, Libra, and Capri-
corno, of Aquario, & Piscibus: but the seeds, whose roots be round,
shall be sowne nigh the full Moone, in March.

Good time to sow all kindes of Corne, when the Moone is in
Cancro: if neither ther, nor the Sunne at that time be E-
clipsed.

The best time to plant, and graft in, is in the increase of the
Moone in Tauro, Aquario, of Capricorne: and not aspected by J. □
P, Saturne, of Mars.

Good to sow Leekes, Lettices, and Cabbages= Lettice in the
wane of the Moone. Sow Cabbages in February, March, of April,
the wane of the Moone: replant them in the full Moone. For
other Apples and other fruits, herbs and flowers, to have them in
best beauty, and greatest vertue, the Moone at the full. Sow of
Garlicke, Parsneps, Carrets, Pease, and Beans, two dayes
before of after the full Moone: Non omnis fert omnia tollit. Good
to set all kindes of Quich-sers, from September, till March. Dung
your Land in the last quarter, that weeds may lesse abound. Good
to fell Timber for building, from Midsummer to Christmas, in
the wane of the Moone. Cut Capies of Jetwell, in the first quar-
ter of the Moone. Cut Wines in February of March.

Remoove trees the last quarter of the Moone betweene Hollar-
e and Twelfside. Good to Lib of Seld Cattell, when the
Moone is in the Head, Thighes, of Knees, at the full Moone.

A fit time to kill fat Swine in the increase, nigh the full Moone;
the farder, the better to imbure the boyling.

Horum observatio, ut non officie religioni, ita si ad usum dexteræ ac-
cudentur accommodetur, utilitatem habet non contemnendam.

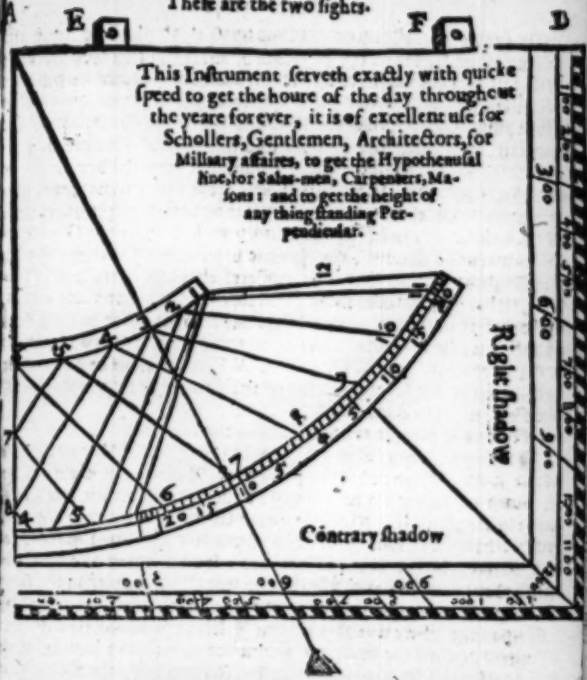

Allestree. 1641.

This Table sheweth you the true declination
the Sunne for every day in the yeare, and is to be used
with the Geometricall Instrument on the next
Page: to know what a clock it is through the yeere, any
time of the day, the Sunne shining faire, or if you
can see the Sunne through a Cloud.

at one

These are the two sights.

The declaration and use of the aforesaid Table of the Declination of the Sun, and the Geometrical Instrument with Examples.

This Instrument, being cut out and exactly Printed, and passed upon a smooth square little board that will not swell, (or cut in 2 parts) with two square sights upon the upper edge of the board or plate, with two little holes in the middle of them of an equal height, that the Sun beames may pierce through both the sights at one time, a plummet of lead, with a small silke thread and fine little

little pearle to move up and downe upon it at pleasure, and falling of the thread on the divisions of Right or contrary Hand will tell you the height of any thing standing straight up without measuring it. Also enter your Table of the Sunnes declination (so to know what a clocke it is at any time: with the day of the moneth, and with the Degree and minutes of Declination against it, laying the fine thread & plummet upon the same number of degrees and min. in the lim of Argent of the Quadrant, bringing up or down the little bead, untill it be fast upon the houre line of 12. a clocke: then lift up handsomely your Instrument Geometricall toward the Sunne, the Sunne beames piercing thozow both the Sights: and at that time, wheresoever the little pearle falleth, either upon an houre line or betwixt two, that a clocke it is either before noone, or after all that day. Remember to have the equall fine plates of brasse pierced in the middist (so your sight may be placed on the side A. D. as ye see E. F. with a line and plummet falling out of the Center A: I call the Scales in this Instrument the two outward edges divided into 1200. parts.

First an Example to know what a clocke it is.

I desire to know what a clocke it is the 15. day of May and your squire Lord, I remember the premises: I enter my Table of the Sunnes declination with the day of the moneth on the left hand and right against it, I see also under the title May: 21. degrees 30 min. the declination. I looke and finde in the bism of margin of the Quadrant the same 21 degrees, leading forth the min. because they be not 30: and I leavy the fine silk thread upon the same 21 degrees, putting up and down the little pearle untill it be fast upon the houre line of 12: then I lift up handsomely my Instrument against the Sun, the Plummet and thread having the true course, the Sun beames piercing thozow both the Sights, I looking up at the Sun thozow both the Sights, seeing the Sun thozow a cloud, so at that time wheresoever place the pearle falleth upon, is the true houre of the day: as if it fall upon the line of 7. this example, it is 7. a clocke in the forenoone, or in the afternoon. If it fall in betwixt the lines of 7 and 8. it is halfe an houre past 7 in the morning, or halfe an houre after 8 in the afternoon the 15 day of May. After this manner must you tooke so any other day in the yeere. There is no Spall in the world quicker and more sure to be right made.

How by this Instrument with Calculation speedily,
to know all heights accessible standing straight up.

Your Instrument as before must be handsomely elevated against the thing to be measured, perceiving the top both the Sides at one time not more then the top of the thing. Mark well the parts of divisions of points, the Plummets thread toucheth in your Scale, if they be of right shadow, multiply the distance of feet or yards knowne from the place where you stand, and the base or roots of the thing to be measured by 1200, and divide by parts of divisions of your Scale which your thread did cut. But and if they be of contrary shadow, worke contrarily: that is, multiply by the parts of divisions cut, and make Division by 1200. Remember ever to adde the height of your eye unto the ground to your Quotient, so have you your desire: the Base of the thing being equall with your standing.

Example.

Let this line a, b, be the height of a tree, a Church-steeple, Castle-wall, a Sconce, or any other thing standing straight upright given to be measured. Admit the thread with the Plummets fall just upon 600 parts of contrary shadow, as you may see in this Triangle: the distance from the Base A, to your standing C, is measured with a Chaine, &c. to be just 115 foot, multiply that by 600, so have you 69000. the which being divided by 1200. yeeldeth you in your Quotient 57 $\frac{1}{2}$ foot, or fiftie seven foot and a half: to this length adjoyne five foot (being the height of your eye to the ground) and so shall you have the whole height of the Tree to be 62 $\frac{1}{2}$ foot. And thus of all others. *Hujus partis hanc sume figuram.*
